Abstract
This Taxonomy Documentation describes the eXtensible Business Reporting Language (XBRL) US Financial Reporting Taxonomy: **US GAAP Investment Management (US-GAAP-IM)**. The US-GAAP-IM taxonomy has been prepared by the XBRL-US Domain Working Group, with feedback from other members of XBRL International and interested parties outside of the XBRL Consortium.

This US-GAAP-IM taxonomy is compliant with the XBRL 2.1 Specification, dated 2003-12-31 and follows the guidance prescribed in the Financial Reporting Taxonomy Architecture 1.0 (FRTA). It is a taxonomy created by combining other taxonomies in the US Financial Reporting Taxonomy Framework. Specifically, the US-GAAP-IM Taxonomy represents financial reporting detail ranging from General Fund Information to the Portfolio of Investments and Financial Highlights used to create XBRL instance documents for investment management companies.

This document assumes a general understanding of accounting and XBRL. If the reader desires additional information relating to XBRL, the XBRL International web site ([http://www.xbrl.org](http://www.xbrl.org)) is recommended.

3. UPDATES AND CHANGES
   3.1. UPDATES TO THIS TAXONOMY
1. Overview

1.1. Purpose

The XBRL-US Domain Working Group has developed the XBRL US GAAP Investment Management (US-GAAP-IM) taxonomy for the purpose of expressing investment management companies’ financial statements according to US GAAP, FASB, SEC and other related/relevant accounting standards.

This US-GAAP-IM taxonomy is designed to facilitate the creation of XBRL instance documents that reflect business and financial reporting for investment management companies according to the Financial Accounting Standards Board, the Securities and Exchange Commission and other generally accepted accounting principles. The purpose of the US-GAAP-IM taxonomy is to provide a framework for the consistent creation of XBRL documents for financial reporting purposes by public sector entities. The purpose of this and other taxonomies produced using XBRL is to supply a framework that will facilitate data exchange among software applications used by companies and individuals as well as other financial information stakeholders, such as lenders, investors, auditors, attorneys, and regulators.

The authority for this US-GAAP-IM taxonomy is based upon US Generally Accepted Accounting Principles (GAAP). The development of the taxonomy was based upon input from accounting firms, technology companies and other domain experts in the field of financial reporting. In addition, the specific content of the taxonomy is based upon standards established by the Financial Accounting Standards Board (FASB), the Securities and Exchange Commission (SEC) and other related standards organizations.

The particular disclosures in this US-GAAP-IM Taxonomy model are:

1. Required by registered investment companies under the Investment Company Act of 1940
2. Typically represented in AICPA model financial statements, checklists and guidance materials as provided from each of the major international accounting firms.
3. Found in common reporting practice, or
4. Flow logically from items 1-3, for example, sub-totals and totals.

1.2. Taxonomy Status

The US-GAAP-IM taxonomy is an Approved taxonomy. Its content and structure have been reviewed by both accounting and technical teams that comprise XBRL-US and XBRL International. The US-GAAP-IM taxonomy complies with the Financial Reporting Taxonomy Architecture 1.0 (FRTA) and XBRL Specification Version 2.1 dated 2003-12-31.

The US-GAAP-IM taxonomy achieved approved status under the XBRL Taxonomy Recognition Process (TRP) 2004. XBRL Taxonomies can exist in two states insofar as XBRL International TRP is concerned:

- **Acknowledged** – A royalty-free taxonomy that the creators have asked XBRL International to list at XBRL.org; XBRL International confirms only that the taxonomy is compliant with the XBRL specification and is available free of royalties. This classification indicates to the business user the degree of endorsement by XBRL International.

- **Approved** – A taxonomy which is technically compliant with XBRL, is available on royalty free terms, follows best practices prescribed by XBRL International (e.g. FRTA) and either has been developed by XBRL International itself or that has followed a public review process similar to XBRL International’s own.

1.3. Scope of Taxonomy

These taxonomies are intended for certain investment management companies that; (1) report under FASB standards and (ii) have relatively common reporting elements in their financial statements. The taxonomies are primarily designed for use by open and closed -end investment companies (mutual funds). The taxonomy is not designed to (but may in part) be suitable for unit investment trusts (UITs),
common (collective) trust funds, investment partnerships, certain separate accounts of life insurance companies or offshore funds.

In practice, even companies within the design scope may require additional taxonomies. These additional taxonomies may be necessary to identify the particular needs of:

- **National jurisdictions** for those companies that require a non-US GAAP standard as the core financial standards setting foundation and may include supplementary reporting requirements or prevent use of available options by local accounting standards setters as well as stock exchanges etc.

- **National industry** or common practice, for example, tax or credit reporting.

- **An individual company**

These extension taxonomies will either extend the US-GAAP-IM taxonomy to meet the particular reporting requirements of that industry, country or company and/or restrict by limiting the use of particular US-GAAP-IM taxonomy elements.

The inter-relationships of the various taxonomies are show in **Figure 1**.

**Figure 1: Interrelationship of Taxonomies and Instance Document**

The IM taxonomy provides the ability to report content that public sector entities typically report in annual, semi-annual or quarterly financial disclosures. Specifically, the taxonomy includes coverage of the following areas of reporting:
2. Overview of Taxonomy

2.1. Taxonomy Structure

The US-GAAP-IM taxonomy contains almost 600 unique, individually identified pieces of information related to financial reporting. All of these elements are contained in the usfr-fste and usfr-ime taxonomies and are “imported” or “included” in the US-GAAP-IM taxonomy. The XML schema file at the heart of the US-GAAP-IM taxonomy provides a straightforward listing of the elements in the taxonomy. The US-GAAP-IM linkbases provide the other information necessary to interpret (e.g. label and reference linkbases) taxonomy elements or place a given taxonomy element in context of other taxonomy elements (e.g. calculation and presentation linkbases).

The application of a metaphor assists in understanding taxonomies. The US-GAAP-IM taxonomy is organized using a financial statement metaphor. This organization is used because it is understood by most accountants who use it to organize their audit working papers; to put the notes to the financial statements in order and in a variety of other uses. This metaphor is also familiar to the users of financial statements.

However, this metaphor and organization somewhat limits an understanding of the power behind an XBRL taxonomy. A taxonomy has multiple “dimensions”. Relationships can be expressed in terms of definitions, calculations, links to labels in one or more languages, links to one or more references, etc. The metaphor used expresses only one such relationship.

The US-GAAP-IM taxonomy is divided logically into sections that correspond to typical US GAAP financial statement components. While there is no true concept of “sections” in the taxonomy, their purpose is to group similar concepts together and facilitate navigation within the taxonomy.

2.2. Label Languages

Currently, labels for taxonomy elements are provided in English. In the future, taxonomy labels could be expressed in additional languages as required.

2.3. References

This Taxonomy provides references to FASB and other relevant standards. Figure 3 shows an example of the reference elements are used in this taxonomy, using “FASB 142, subparagraph 23” to illustrate how a reference is matched to these elements:

**Figure 3: Reference Naming Structure**

<table>
<thead>
<tr>
<th>Name:</th>
<th>FASB</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number:</td>
<td>142</td>
</tr>
<tr>
<td>Paragraph:</td>
<td></td>
</tr>
<tr>
<td>Subparagraph:</td>
<td>23</td>
</tr>
<tr>
<td>Clause:</td>
<td></td>
</tr>
</tbody>
</table>

Authoritative reference information used throughout the taxonomy relies on a series of acronyms. The following list provides an overview of the acronyms used commonly throughout the authoritative
references:

**Acronyms by Organization:**

**AICPA**
- Accounting Research Bulletin (ARB)
- AICPA Opinion and Interpretation
- Industry Audit and Accounting Guide (AAG)
- Statement of Position (SOP)
- Practice Bulletin (PB)
- AICPA Accounting Interpretation (AIN)
- AICPA Accounting Principles Board Statement
- AICPA Issues Papers
- AICPA Technical Practice Aids (TPA)

**FASB**
- Accounting Principles Board Opinion (APB)
- Statement of Financial Accounting Standard (FAS)
- FASB Interpretation (FIN)
- FASB Technical Bulletin (FTB)
- Emerging Issues Taskforce (EITF)
- Implementation Guide (Q&A)
- FASB Staff Position (FSP)
- Current Text (CT)
- Accounting Principles Board Statements (APS)
- FASB Financial Accounting Concepts (CON)

**SEC**
- Regulation S-X (SX)
- Article 9 (ART 9)
- Article 4 (ART 4)
- Regulation S-K (SK)
- Regulation S-B (SB)
- Regulation S-T (ST)
- Staff Accounting Bulletins (SAB)
- Regulation T (Reg T)
- Staff Position (SP)
- Financial Reporting Release (FRR)
- Staff Legal Bulletin (SLB)
- SEC Industry Guide

**OTS**
- Federal Regulation (FR)

### 3. Reviewing This Taxonomy

There are a number of approaches to reviewing the taxonomy both from an accounting and technical XBRL perspective. For more information on reviewing taxonomies, reviewers should read the Reviewer’s Guide to Financial Reporting Taxonomies 1.0 as published by XBRL-US.

### 4. Sample Instance Documents

Sample instance documents have been provided for each industry taxonomy, which may be useful in helping you understand how the taxonomy works and is intended to be used. If you are confused by something in the taxonomy, look for that information in the sample instance documents to see if the context helps explain the taxonomy content.
5. Updates and Changes

5.1. Updates to this Taxonomy
This taxonomy will be updated with revisions for errors and new features within the following guidelines:

- Since financial statements created using a taxonomy must be available indefinitely, the taxonomy must be available indefinitely. All updates will take the form of new versions of the taxonomy with a different date. For example, the taxonomy http://www.xbrl.org/us/fr/gaap/im/2005-02-01/us-gaap-im-2005-06-28.xsd will never change. New versions will be issued under a different name, such as http://www.xbrl.org/us/fr/gaap/im/2006-12-31/us-gaap-im-2006-12-31.xsd. This will ensure that any taxonomy created will be available indefinitely.

- It is anticipated that this taxonomy will be updated as required to incorporate changes in generally accepted accounting principles and business reporting norms.

5.2. Comments and Feedback
Comments and feedback on either accounting concepts within the taxonomy or technical aspects of the US Financial Reporting Taxonomy Framework are welcome, particularly ideas to improve this taxonomy. If you have a comment or feedback or wish to report an error, email comments to Brad Homer (bhomer@aicpa.org).

Detailed responses will not be provided for every comment submitted, however a summary of which feedback has been incorporated will be provided.
